CHARLES ANDREI GALVAN

IT Graduate | Software Development · Networking · IT Support · AV & Broadcast

Marikina City, Philippines | formalcharlesandreigalvan@gmail.com | linkedin.com/in/charles-andrei | github.com/Charles494-prog

SUMMARY

BS Information Technology graduate with 5+ years of hands-on experience in software development, networking, IT support, and live AV/broadcast operations. Builds and maintains production systems in Laravel, Rust, and Tauri, including a platform with about 500 automated tests that cut reporting from weeks of team work to 1–2 hours for one person. Open-source contributor to Flash game preservation projects, Cisco Networking Academy CCNA course graduate, and experienced technical team lead.

TECHNICAL SKILLS

Languages: PHP, JavaScript, TypeScript, Python, Rust, Java, SQL, HTML5, CSS3, C, C++, VB.NET

Frameworks & Tools: Laravel 12, React JS, Tauri 2, Node.js, Express, Flask, Vite, Tailwind CSS, REST APIs, Laravel Reverb, PHPUnit, Git, GitHub

Data: MySQL, MariaDB, SQLite, database design, Excel VBA/Macros & advanced formulas, Power BI

Networking: TCP/IP, LAN design, router & switch configuration, firewall configuration, wired & wireless networks, MAC filtering, network troubleshooting

IT Support & Systems: Windows administration, Linux installation, BIOS configuration, user & admin accounts, Windows debloating, drive encryption, backups, PowerShell, Bash, RustDesk, AnyDesk

AV & Video: OBS Studio, live streaming, NDI, RTSP, RTMP, sound systems, LED walls, HDMI matrix, Adobe Premiere Pro, Filmora Pro, color grading

AI Tools: Claude Code, Codex, ChatGPT; AI-assisted development and workflow automation

EXPERIENCE

Web Content Developer Intern | Nephila Web Technology Inc. — Dec 2025 – Apr 2026

- Built interactive course pages for the EdTech department's Moodle LMS using HTML, CSS, and JavaScript.
- Delivered front-end components on schedule as part of an agile development team.
- Applied UI/UX best practices for e-learning and contributed layout and visual design decisions to improve learner engagement.

Software Developer (Volunteer) | Church Secretariat Office (confidential internal systems) — 2023 – Present

- Build and maintain the secretariat's internal software (Excel VBA, a Laravel web platform, and a desktop/mobile app), used daily to manage thousands of records with complex eligibility rules.
- Cut monthly reporting from weeks of work by a full team to 1–2 hours for one person with automated report builders and Word, PDF, and Excel generation.
- Laravel 12 platform: MVC with service classes, MariaDB with migrations and transactional row locking, queues and scheduler, REST APIs, and real-time chat via Laravel Reverb (WebSockets).
- Made the platform available to every staff computer on the office network (LAN), so the whole team works in it at the same time.
- Built an in-app chatbot that answers staff questions about the data, such as record counts and lookups, by querying the database.
- Security: OTP login, encrypted database columns, role-based access, rate limiting, CSRF protection, session timeout, and audit logging.
- Wrote about 500 PHPUnit feature tests; built a responsive front end with Vite, Tailwind CSS, and Chart.js dashboards.
- Ported a companion PHP records app to Rust as a single-file Windows desktop app (WebView2, embedded HTTP server, SQLite) and an Android app with Tauri 2, sharing one Rust core with identical document output.
- Automated deployment with PowerShell launchers that install dependencies, pull updates from GitHub, and back up the database before migrations.

Head of Technical Department (Volunteer) | Church — 2020 – Present

Network & IT Support

- Designed and installed the church's LAN: network topology, structured Ethernet cabling, and wired and wireless coverage.
- Configured routers, switches, and firewalls, including firewall rules, MAC address whitelisting/blocklisting, and other access-control settings.
- Set up and maintain workstations: BIOS configuration, Windows and Linux installation, application setup, and user/admin account management.
- Optimize and secure systems through Windows debloating, drive encryption, and Microsoft management tools.
- Provide hardware, software, and network troubleshooting, data backups, and remote support via RustDesk and AnyDesk.

AV & Broadcast

- Lead the technical team for weekly services, live events, and online broadcasts; train volunteers on equipment and OBS Studio.

- Run live production in OBS Studio: scenes, sources, overlays, transitions, virtual cameras, recording, streaming, and online conferencing.
- Integrate IP-based video (NDI, RTSP, RTMP) over the network for camera feeds, monitoring, and live streaming.
- Troubleshoot audio/video sync, dropped frames, encoding, and signal-routing issues in real time during live broadcasts.
- Operate sound systems and microphones; design HDMI, Ethernet, audio, and video signal chains for PCs, cameras, LED walls, projectors, and multi-display setups.

Freelance Video Editor | Gaming Creators & Film Projects 2019 – Present

- Edit gaming and film content: cuts, transitions, motion graphics, effects, and thumbnails.
- Perform color correction and grading in Adobe Premiere Pro, Filmora Pro, and KineMaster to client specifications.

PROJECTS

Dungeon Blitz Revival (Open-Source Contributor) | TypeScript, Node.js, Python, Java

- Turned this abandoned Flash MMO into a playable single-player game by implementing missing enemy AI and pathfinding and fixing broken game logic on a local Node.js game server with a binary TCP protocol.
- Optimized rendering and UI; built a mod system, Python tools that patch the client's ActionScript bytecode, a one-click launcher, and Discord integration.

Battle Realms Clan Buff Mod (Personal Project) | Python, x86 Assembly, AutoHotkey 2026

- Built Python tools that generate 9 balanced gameplay presets from one INI file by patching only the target cells of the game's data spreadsheet, with a CSV audit of all 10,127 changes and checksum-verified backups.
- Reverse-engineered the compiled Windows executable (no source code available) and added a new PE section with x86 hooks that lift hard-coded unit, yin/yang, and building caps and replace the cubic peasant-spawn curve with a logarithmic one.

Social Empires & Social Wars Revival (Open-Source Contributor) | Python, Flask

- Extended Flask-based preservation servers with JSON-patch game mods and built a Python launcher that starts each game's server and opens the client.

Travel Mobile App | React JS, Java

- Built a travel mobile app system using React JS and Java.

Dental Clinic Management System | Capstone | Laravel, MySQL, Hostinger 2025

- Built and deployed a full-stack clinic system live on Hostinger with 2FA and role-based access control.
- Developed patient records, appointment scheduling (full CRUD), and dental inventory with automatic restock thresholds.

Interactive Game Show in PowerPoint | Personal Project 2024

- Recreated a TV game show format as a presenter-driven interactive game using advanced animations, triggers, and branching logic.

LEADERSHIP & AWARDS

Overall Organizer, University TEDx-Style Event | FEU Roosevelt Marikina

- Led speakers, logistics, AV setup, and program flow for an event of 400 attendees, managing technical, creative, and operations teams.

Director & Cinematographer, "Para Pasada" Documentary | FEU Roosevelt Marikina

- Won Best in Cinematography at the college-level film competition; led concept, scripting, shooting, and post-production.

Competitor, Cisco NetRiders International Competition | Cisco

EDUCATION

Bachelor of Science in Information Technology | FEU Roosevelt Marikina 2022 – 2026

CERTIFICATIONS

- CCNA: Switching, Routing & Wireless Essentials (SRWE) – Cisco Networking Academy
- CCNA: Enterprise Networking, Security & Automation (ENSA) – Cisco Networking Academy
- Certified Information Data Security Practitioner (CISDSP) – EastWest
